

# Seamless onboarding

## **VIP Transportation with Mercedes Vans**

Our VIP Transportation Service picks you up from the airport in our Mercedes Benz vans. Our drivers escort you to your hotel and check you in.

## **In the comfort of your hotel room**

You don't need to leave your hotel room. Our phlebotomist will knock on your door the morning after your arrival to collect the samples for your lab work.

## **No forms to fill, no check-in to do**

Our driver will pick you up from your hotel and escort you to the VIP Room on the treatment day. There, you'll sit comfortably as our staff checks you in and goes over your itinerary for the day. No forms to fill out; our system is entirely paperless.

# TruDiagnostics

State-of-the-art Epigenetics Testing

Epigenetic DNA testing is the state-of-the-art way to determine telomere length, cellular age, and the biological markers of age. Your RENUÉ Journey starts with an epigenetic test to assess your baseline age at the cellular level.

Bringing accountability to regenerative medicine is one of our core values. At RENUÉ, we conclude our protocols and treatments with another round of testing to determine if you are making progress in your wellness journey.

# Renue's Laboratory

Class 5 onsite Lab

Take a visual tour of the Class 5 laboratory onsite while our qualified professionals prepare your stem cells from the incubators to the cell counter and then the delivery method. No loss in bioavailability since the cells aren't frozen for transportation.

A close-up, top-down view of a surgeon's face, wearing a white surgical mask and glasses. The surgeon is using a robotic arm and a handheld ultrasound scanner. The background is a dark, blue-tinted image of the surgical environment.

# State-of-the-Art Technology & board-certified surgeons

All intra-articular stem cell joint injections are done using the latest state-of-the-art musculoskeletal ultrasound scanners with needle enhancement function performed by a board-certified orthopedic surgeon.

# Hyperbaric Chamber

A consensus among stem cell scientists is that Hyperbaric Chamber treatments highly increase stem cell and exosome treatments' efficacy. At RENU, we have a multi-place hyperbaric chamber capable of treating four patients at one time.

We have a helipad and a hyperbaric chamber. On Mexico's west coast, our facilities provide care not only for anti-aging, stem cell activation, and wound care treatments but also for diving accidents.

We are the only facility in Mexico that requires an emergency-trained nurse accompanying every group of patients during hyperbaric treatments.

# Post Treatment

At RENUE, we take care of our patients after they finish their treatments. We offer you 30, 60, 90 days as well as 6 months post-treatment care services to check your progress.

# Exosomes

At Stem cell therapy is a successful treatment for the regeneration of cells, but combining exosomes can even enhance its efficiency.

In stem cell therapy, we use donor cells to regenerate the lost cells in a specific body part. Exosomes can be extracted from the already donated cells for stem cell therapy. Exosomes are extracted and sterilized from the donated MSCs (Mesenchymal stem cells). These vesicles contain micro-RNA, m-RNA, proteins, and cytokines administered inside the body through the IV route.

# Cellular Skincare Products

We have developed our own line of skincare, shampoo, and rejuvenation products. At our state-of-the-art lab, the team of highly qualified scientists developed our own line of products using our stem cell, exosome, growth factors, and culture media.

Fighting the aging process involves several aspects; cosmetics, aesthetics, hair restoration, and skin rejuvenation are essential to slowing aging.

You will enjoy our line of skin and hair care products specially developed for our patients to continue to benefit from their RENUÉ treatments.

# The Renue Center

## How we compare to others

The RENUÉ Centre delivers world-class services to make you feel comfortable and relaxed while enjoying a worry-free journey to wellness and a better life.

# The Renue Medical Center

## **State-of-the-art Epigenetic Testing**

Epigenetic DNA testing is the state-of-the-art way to determine telomere length, cellular age, and the biological markers of age. Your RENUÉ Journey starts with an epigenetic test to assess your baseline age at the cellular level.

Bringing accountability to regenerative medicine is one of our core values. At RENUÉ, we conclude our protocols and treatments with another round of testing to determine if you are making progress in your wellness journey.

# Others

## **Standard Testing**

Others do not offer such testing and technology to you.

## **Regular cabs**

Grab a cab in a strange city where you may not even speak the language.

## **Waiting room**

Sit in a waiting room after fasting all night to collect your sample in the clinic room.

## **Endless forms and standing inline**

Check-in by standing in line just to be asked to fill out endless forms on a clipboard balanced on your knees.

# The Renue Center

## **Hyperbaric Chamber Centre**

A consensus among stem cell scientists is that Hyperbaric Chamber treatments highly increase stem cell and exosome treatments' efficacy. At RENUÉ, we have a multiplace hyperbaric chamber capable of treating four patients at one time.

We have a helipad and a hyperbaric chamber. On Mexico's west coast, our facilities provide care not only for anti-aging, stem cell activation, and wound care treatments but also for diving accidents.

We are the only facility in Mexico that requires an emergency-trained nurse accompanying every group of patients during hyperbaric treatments.

## **Renue's Laboratory - Class 5 onsite Lab**

Take a visual tour of the Class 5 laboratory onsite while our qualified professionals prepare your stem cells from the incubators to the cell counter and then the delivery method. No loss in bioavailability since the cells aren't frozen for transportation.

## **Review RENUÉ's Medical Licenses**

It is part of RENUÉ's standard procedure that you review our Regenerative Medicine License, Harvest, Culture and Bank license, and minimally invasive surgical procedures license.

# Others

## **Portable Hyperbaric Chamber**

If there is a chamber, it is a home-use portable chamber that can only deliver compressed oxygen at 1.3 ATA; this configuration is far from truly therapeutic protocols.

No helipads!

No emergency-trained nurse accompanying patients during hyperbaric treatments.

## **Third-party, offsite lab**

You get shown a copy of a flowcytometry test done a month prior on a batch of cells that you aren't getting and in a language that you don't speak or read. Cells are frozen, transported, and thawed, losing up to 30% bioavailability and posing potential chain of custody issues.

## **No Medical Licenses for review**

Listen to a salesperson explain to you that the third-party lab license also applies to them and that they do not have licenses available for your review.

# The Renue Center

## **State-of-the-art technology and board-certified surgeons**

All intra-articular stem cell joint injections are done using the latest state-of-the-art musculoskeletal ultrasound scanners with needle enhancement function performed by a board-certified orthopedic surgeon.

## **Post Treatment**
